

ABSTRACT

An in-plane switching mode LCD device and a method for manufacturing the same is disclosed, in which the in-plane switching mode LCD device includes a substrate; a plurality of common electrodes at fixed intervals in one direction on the substrate; an insulating layer on the substrate including the plurality of common electrodes; a plurality of pixel electrodes at fixed intervals on the insulating layer between the respective plurality of common electrodes; and a dummy common electrode on the insulating layer at one side of one of the pixel electrodes, wherein the dummy common electrode is electrically connected to an outermost common electrode among the plurality of common electrodes.
